- **Level B3:** RAM: 16 Gb / HDD: 300 Gb

Regular virtual machine backup service

Backup copies of a virtual machine allow you to quickly restore it to a working state in the event of failures, damage or virus attacks, minimizing downtime, ensuring reliability and continuity of operation.

There are two backup options available: **Daily** or **Weekly**.
The last 7 copies are saved. When a new one is created, the oldest one is automatically deleted.
It also provides the ability to create a **snapshot** of a virtual machine and restore from it.

Service cost: 25% of the price of the selected virtual machine.

We can also help you migrate your existing physical mail server to a virtual machine.
